Objective

EC2 (Elastic Compute Cloud) is a core service provided by Amazon Web Services (AWS) that enables users to rent virtual servers in the cloud to run applications, store data, or handle computational workloads.

An EC2 Windows instance is a virtual machine running the Microsoft Windows operating system on Amazon Web Services (AWS) EC2 (Elastic Compute Cloud). This allows you to run Windows-based applications, manage Windows Server configurations, and use various Microsoft software (like SQL Server, IIS, etc.) in the cloud without having to manage physical hardware.

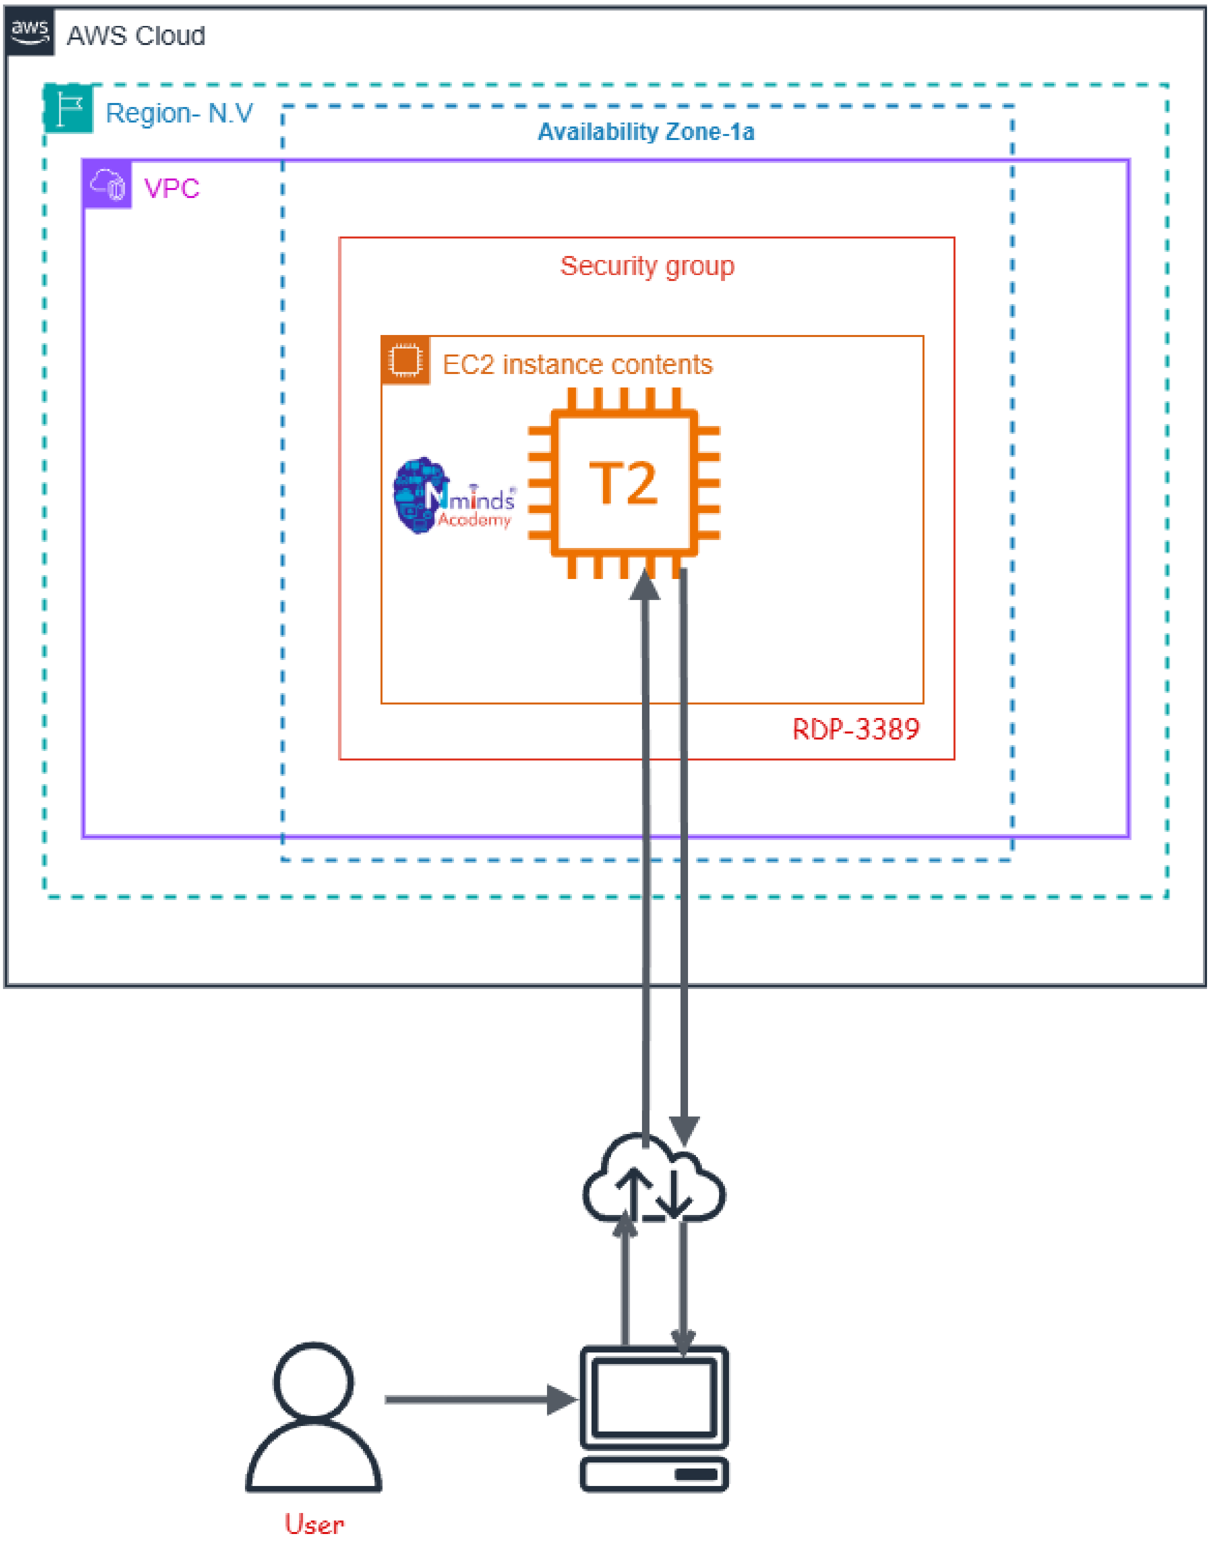
Use Cases for EC2 Windows Instances:

- Web and Application Hosting: Run IIS web servers or other Windows-based web applications in the cloud.
- Database Servers: Host SQL Server databases with EC2 Windows instances, using RDS or EC2 for more control.
- Remote Desktop Applications: Set up RDS (Remote Desktop Services) for remote access to Windows desktops in the cloud.
- Development and Testing: Create development environments with Windows OS to test .NET or other Windows-based applications.

Used Services in AWS:

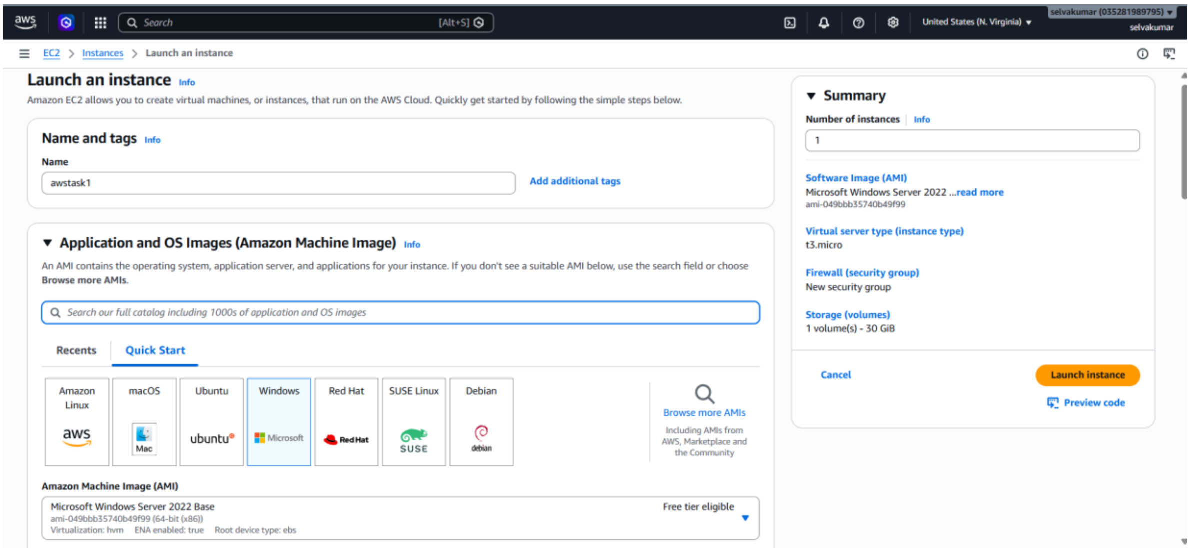
Amazon EC2

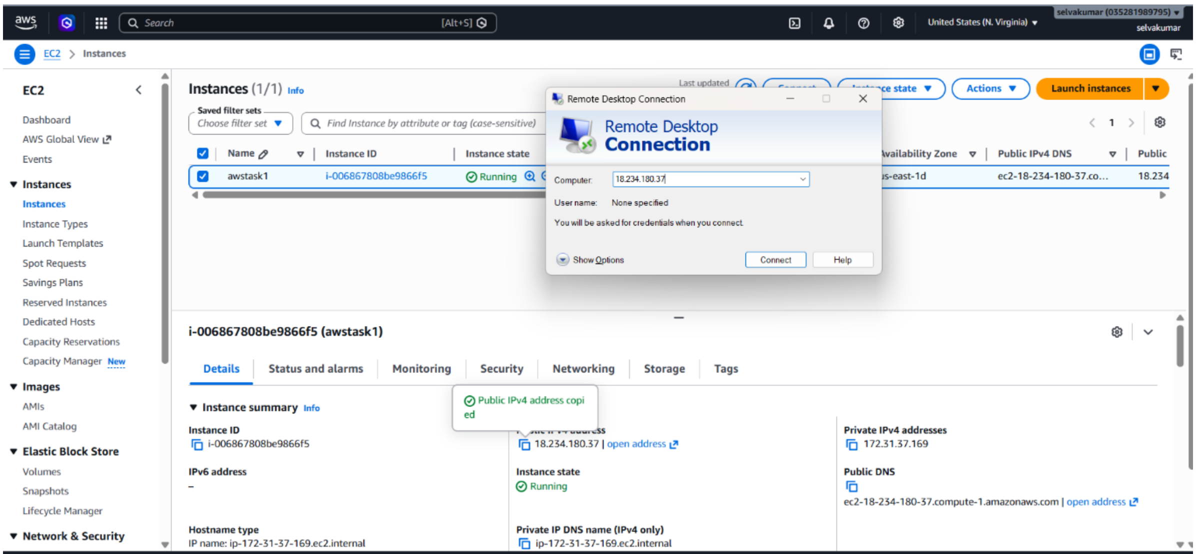
Topology

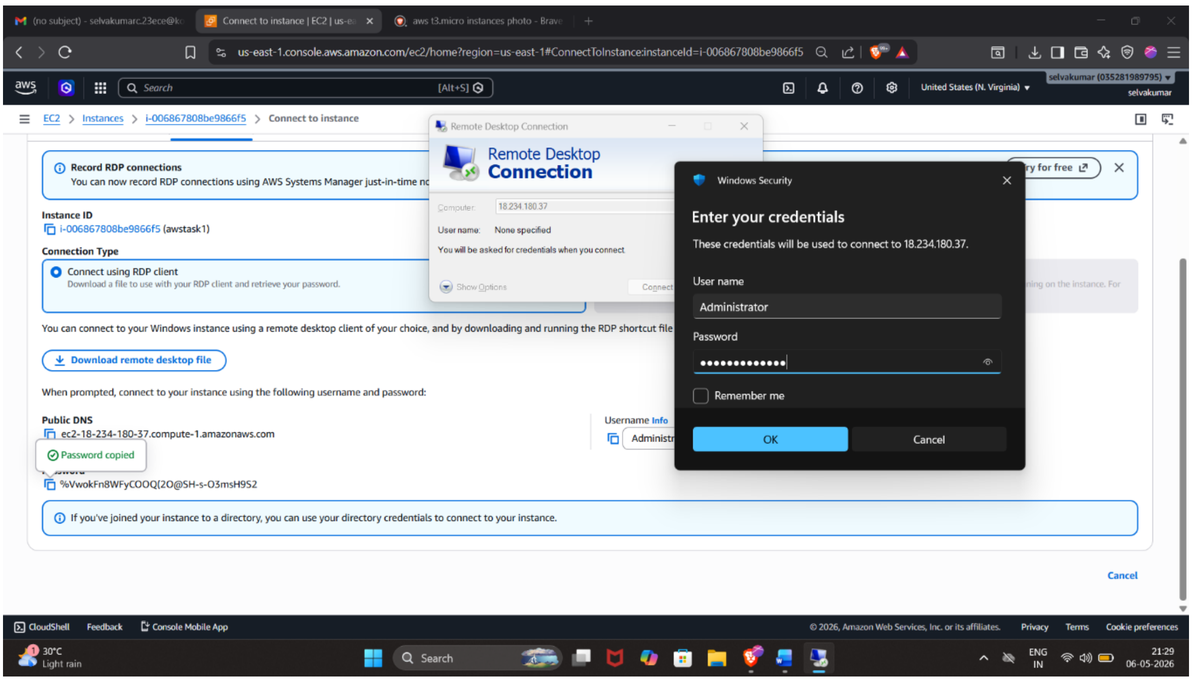


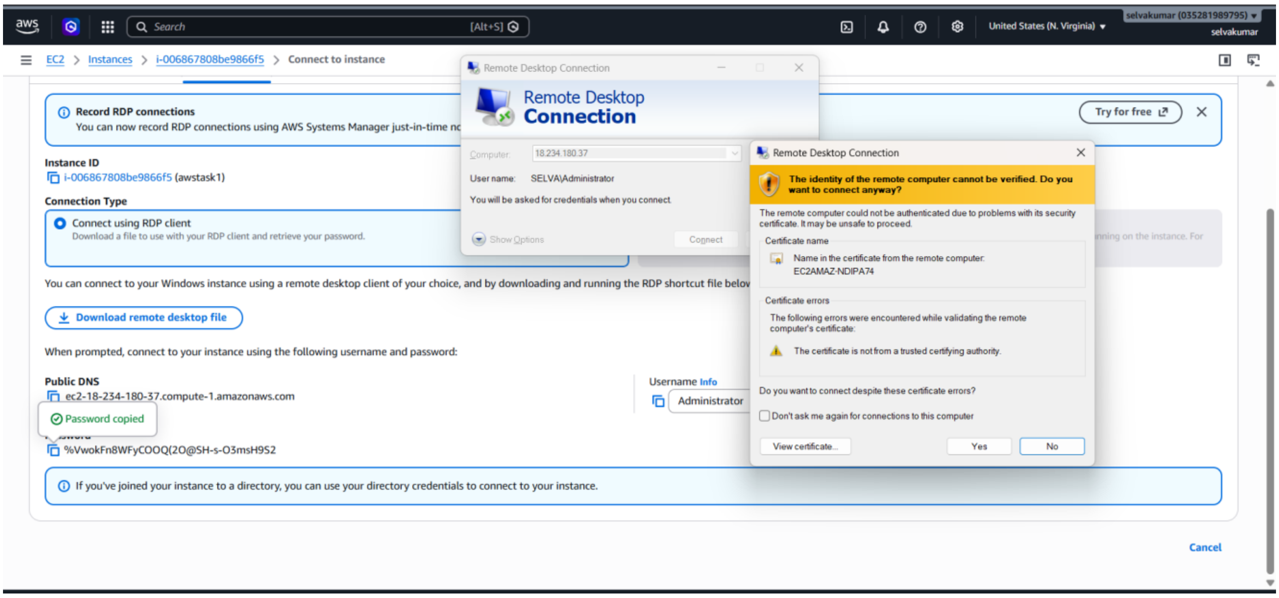
AWS Cloud
Region- N.V
Availability Zone-1a
VPC
Security group
EC2 instance contents
T2
RDP-3389
User

Execution Tasks:

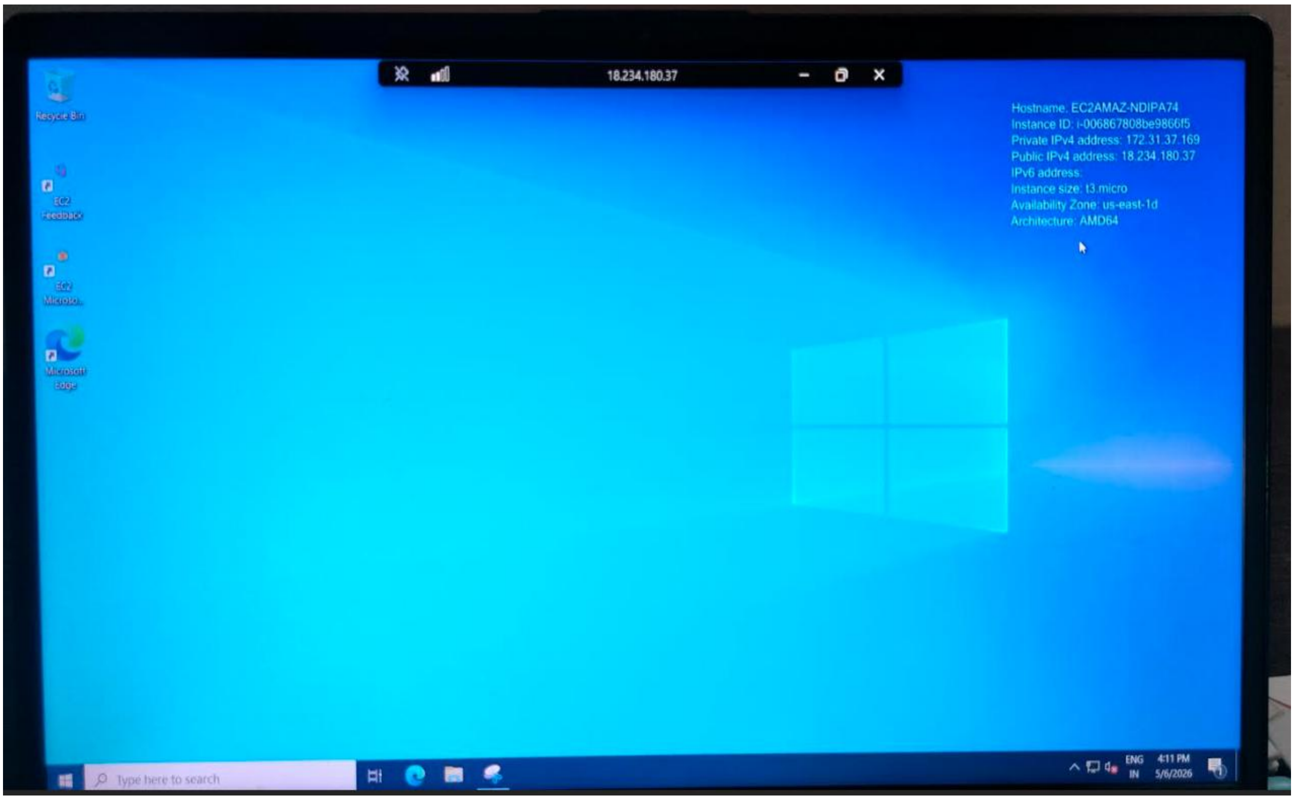








EC2 > Instances > i-006867808be9866f5 > Connect to instance
Record RDP connections
Instance ID
i-006867808be9866f5 (awstask1)
Connection Type
Connect using RDP client
Download a file to use with your RDP client and retrieve your password.
Download remote desktop file
When prompted, connect to your instance using the following username and password:
Public DNS
ec2-18-234-180-37.compute-1.amazonaws.com
Password copied
Username
Administrator
If you've joined your instance to a directory, you can use your directory credentials to connect to your instance.
Cancel
Remote Desktop Connection
Remote Desktop Connection
The identity of the remote computer cannot be verified. Do you want to connect anyway?
The remote computer could not be authenticated due to problems with its security certificate. It may be unsafe to proceed.
Certificate name
Name in the certificate from the remote computer:
EC2AMAZ-NDIPA74
Certificate errors
The following errors were encountered while validating the remote computer's certificate:
The certificate is not from a trusted certifying authority.
Do you want to connect despite these certificate errors?
Don't ask me again for connections to this computer
View certificate...
Yes
No



18.234.180.37
Hostname: EC2AMAZ-NDIPA74
Instance ID: i-006867808be9866f5
Private IPv4 address: 172.31.37.169
Public IPv4 address: 18.234.180.37
IPv6 address:
Instance size: t3.micro
Availability Zone: us-east-1d
Architecture: AMD64
